1.0 Introduction

Target Population:

- Children aged 4 - 18 years old who have been diagnosed with severe fecal disorders (functional constipation, Hirschsprung's disease, anorectal malformation, spinal abnormalities); and
- Been referred by their primary physician for cecostomy tube (C-tube) insertion.
- **Exclusions**: patients are to be removed from this pathway if there are significant postoperative complications (eg. peritonitis) or a change in diagnosis.

Target Users:

- Surgeons, residents, fellows, nurse practitioners, and nurses.

2.0 Clinical Recommendations

This pathway is a general guideline and does not represent a professional care standard governing providers' obligations to patients. Care is revised to meet individual patient needs. **Level C: Expert Opinion**
3.0 Implementation & Evaluation Plan

3.1 Implementation Plan

- Education and awareness building by General Surgery Program (Surgeons, NPs, fellows, nurse educator) at: fellow orientation (once per year) nursing orientation (every 3 months), and residents orientation (every month).
- Surgeons to communicate any updates in practice to Division of General Surgery and Radiology.
- Radiologists to communicate any updates in practice to Division of General Surgery and Radiology.

3.2 Evaluation Plan

- Length of stay (LOS) evaluation
