Introduction

Many children with cleft lip and palate have a residual cleft lip/nose deformity requiring revision surgery to improve the appearance of the nose.

A septorhinoplasty is a surgical procedure used to repair a deviated nasal septum or to correct an obstruction inside the nose which can cause problems with breathing. It can also improve the shape, appearance and function of the nose. The preference would be to complete jaw surgery, if necessary, prior to a septorhinoplasty, unless there are psychosocial issues necessitating earlier treatment.

Each individual repair is unique, so the post-operative care is individualized. Revision may be needed later on. Surgery usually takes two to three hours.

Septorhinoplasty can be either a daycare procedure or an overnight stay on the inpatient unit. Where possible the overnight cases should be identified prior to the procedure day to assist with inpatient planning.

- **Target Users:** Surgeons, fellows, residents, nurses on the in-patient units and nurses in the clinic (utilized for pre op teaching).
- **Inclusion Criteria:** This pathway applies to patients coming for surgery between the ages of 13 to 22 years who have been diagnosed with cleft lip/palate by the Cleft Lip and Palate Program/Craniofacial Program who require Septorhinoplasty surgery with no underlying disease or co-morbidity.
- **Exclusion Criteria:** This pathway is not for use in patients with post-operative complications.

Definitions

- **Septoplasty**- a repair of the nasal septum
- **Rhinoplasty**- an operation of the nasal bones, cartilage and soft tissues of the nose
- **Septorhinoplasty**- a surgical procedure done on the nose, nasal septum and the wall between the two sides of the nose
# Recommendations

## Septorhinoplasty Care Pathway

<table>
<thead>
<tr>
<th>Goals</th>
<th>Pre-Operative</th>
<th>Immediately Post-Operatively</th>
<th>Discharge Within 24 Hours Post-Op</th>
</tr>
</thead>
</table>
| 1. To repair a deviated septum or correct an obstruction inside of the nose which can cause problems with breathing  
2. To improve the shape, appearance and function of the nose | Complete the following physical assessment on admission from PACU:  
- Arterial assessment  
- Monitor airway closely  
- Examine for obstructive breathing and coughing exertion  
- Ensure head of bed is elevated to 30 degrees  
- Allergy identification in SSI  
- Pain assessment q4h  
- Vital signs q2h per bedside order and as per protocol when administering narcotics  
- Pressure ulcer risk assessment  
- FABIDS risk assessment  
- Accurate intake and output q2h |  
1. Adequate pain control  
2. Airway management  
3. Initiate Septorhinoplasty postop order set in Epic |  
1. Ensure safe and timely discharge  
2. Encourage and engage child and caregivers to participate with care to ensure that they are comfortable and familiar with care they need to provide at home |
|  |  |  |  |
|  |  | Prior to discharge, the following criteria must be met:  
- Adequate  
- Hydration maintained  
- Adequate pain control  
- No active bleeding  
- Child and caregiver understand discharge teaching  
- Child and caregiver are comfortable caring for dressing/drain and managing pain |  |  |
|  |  |  |  |
| Dietary |  |  |  |
|  |  |  |  |
| Medication |  |  |  |
|  |  |  |  |
| Dressings/Anti-Microbial Agent |  |  |  |
|  |  |  |  |
| Education |  |  |  |
|  |  |  |  |
| Address child and caregiver questions or concerns about surgery  
* Time social work if needed |  |  |  |

## Expected Date of Discharge: within 24 hours post-op
